EDUCATION

Long Island University, B.S in Computer Science
Dean's List: Spring 2024

Expected Graduation: May 2026
GPA: 3.90/4.00

SKILLS

Programming Languages: C++, C#, Python, HTML/CSS, Java, JavaScript, Dart

Developer Tools/Frameworks: Visual Studio Code, Git, Unity, Jupyter Notebook, Flutter

WORK EXPERIENCE

Technology Intern – Nassau County Aquatic Center, NY

Jul 2024– Present

- Supported the setup, operation, and troubleshooting of timing systems, electronic scoreboards, and touchpad sensors during high school, collegiate, and club swim meets.
- Gained hands-on experience with hardware-software integration and event tech systems in a live event environment.
- Collaborated with meet officials and facility staff to ensure accurate data capture and display across multiple systems.

Lifeguard Supervisor– Nassau County Aquatic Center, NY

Jul 2023– Present

- Certifications in First-Aid and CPR, ensuring readiness to respond to emergencies and provide life-saving assistance.
- Supervised and coordinated lifeguard team to ensure optimal coverage and safety procedures were followed.
- Provided exceptional customer service by addressing concerns and assisting patrons with facility rules.

Private Tutor – Computer Science, Math, and Physics – New York, NY

Sep 2023 – Jun 2024

- Delivered one-on-one tutoring in Object-Oriented Programming and Advanced Data Structures and Algorithms to university peers, reinforcing core programming concepts and project development.
- Provided personalized instruction in Algebra I and II to high school students, supporting improved grades and foundational math skills.

PROJECTS

Screen Time Application | Flutter, Dart, Android SDK

- Built a Flutter mobile app to track screen time and app usage by querying system-level usage stats.
- Developed interactive dashboards with pie charts, progress bars, and per-app limits; handled Android permissions, persistent storage, and lifecycle-aware updates using clean architecture patterns.

FlowState | TypeScript, Next.js, React

- Built a full-stack Kanban productivity app with to-do lists, notes, priority levels, and due dates using Next.js App Router and TypeScript, deployed and actively maintained.
- Architected with custom React hooks, modular component system, dynamic filtering, and lifecycle-aware state management across the entire codebase.
- Implemented clean separation of concerns across app, components, hooks, lib, and types directories for a scalable and maintainable project structure.

Paper Trading Bot | Python, Alpaca API, scikit-learn, Streamlit

- Built an AI-driven automated trading bot using Alpaca's paper API with \$100k simulated capital, implementing 5 strategies including SMA Crossover, RSI, MACD, Mean Reversion, and a Random Forest ML Ensemble.
- Engineered a modular strategy registry, position sizing logic, backtesting engine, and real-time Streamlit + Plotly dashboard tracking Sharpe ratio, max drawdown, and equity curves; classifier trained on Bollinger Bands, MACD, RSI, and SMA features.
- Designed with production-grade logging (loguru), pluggable architecture, and clean separation across data, strategies, execution, dashboard, and backtest modules.
